DEVELOPER DOCUMENTATION

First command `cd` is just to make sure that you end up in a directory that will contain two subdirectory `decisionengine` and `decisionengine_modules`. Of course this can be done in any directory, not necessarily home directory.

2.1 Decisionengine_modules

2.1.1 Prerequisites:

In Addition to above installed packages

```
yum install condor
pip3 install htcondor boto boto3 google_auth google-api-python-client gcs-oauth2-boto-

2.1.2 Test

```
cd

git clone https://github.com/HEPCloud/decisionengine_modules
python3 -m pytest decisionengine_modules
```

Current status:

```

This data is taken from billing and arranged as dictionary of AccountConstants instead of separate class for each billing class. This way is more convenient to use in programmes.

```
class decisionengine_modules.AWS.sources.DEAccountConstants.AccountConstants (constants={})  
    Bases: object
```

```
    info ()
```

```
decisionengine_modules.AWS.sources.DEAccountConstants.load_constants (constants_file)  
    Load constants from file.
```

```
    Parameters constants_file (file) – configuration file as python dict
```

```
    Return type AccountConstants

Retry on error with parameters of how many times (nretries) and interval in seconds (retry_interval). If the function to be decorated is an instance method and the values come from a configuration, then this decorator can retrieve these two parameters from instance attributes with the same name. Otherwise, use the default values or pass new values to the decorator.
